# The SOS Universal Backup System

Backup any data, anytime, anywhere.

## SOS Universal Backup™ with LiveProtect. Backup any data, any time, to any destination

SOS gives you the flexibility and power to create a backup that will meet your need. Backup your MS Outlook daily to 6 global datacenters. Backup your entire computer to a hard-drive nightly or backup My Music to your iPod each hour or engage LiveProtect™ to have SOS watch your files and provide continuous real-time data protection. You save it – we back it up offsite invisibly and automatically, keeping an unlimited version history that lets you roll-back to any point in time.

SOS provides Big-Business IT best-practice for the little guy – true multi-destination, multi-schedule backup that can be adapted to meet your needs but at consumer price. SOS is software as a service billed at a low monthly subscription. A basic annual subscription costs less than most stand-alone backup software packages – let alone a tape-drive or an external hard-drive.

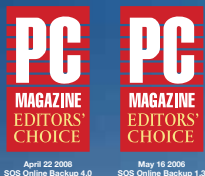

## Local Backup

Online backup is invaluable but simply cannot protect your entire computer. Using SOS local backup system, you can backup your entire computer, open/locked files and operating system files to any local medium, whether it is an external hard-drive, a local network location, a USB stick or an iPod.

## Unlimited Number of Computers

Backup as many computers as you like using one account. Over 60% of households have more than one computer, and SOS allows you to backup and recover from all of your machines. Backup your home, office and laptop computers all on one account for easy access to ALL your files from anywhere.

### Unlimited Versions & Powerful Recovery

Keep an unlimited version history of all your files – roll back your books to last year's tax records if you wish. Use our time machine feature to go back to the date you want to restore and recover that snapshot of files & versions.

### Archiving

Unlike other online backup systems, we do not delete the file from your backup just because you delete the file from your computer. Over 80% of data loss occurs due to accidental deletion. Rest assured, we keep every version of every file forever. Unless you choose to remove it.

### Fully Flexible Scheduling

Monthly, weekly, daily, hourly or instant backup.

### LiveProtect™

Engage SOS LiveProtect™ to have SOS back up files as soon as a change is detected.

### Intelligent File Filters

Tell SOS Online Backup to watch your My Documents folder but to ignore all \*.mp3's and \*.avi's. Alternatively, tell SOS to only protect \*.doc, and \*.xls. Either use our pre-sets, or set your own inclusion/exclusion mask.

### Enterprise Compression & Transfer Systems

The SOS compression system only backs up changed files and then only the changed 1's and 0's are transferred. On a 500 MB database (MYOB/Intuit/Turbo Tax) the daily transfer can be as small as 5 KB. Our transfer system is enterprise grade, meaning that large file transfers are resumed at the KB of interruption, and does not start at the beginning like most online backup systems.

### Global Roaming Access to Your Files

Because your data is being backed up daily to the SOS Backup Server Grid - you can access your data anywhere in the world using just a web-browser. Never be without that critical file again.

### Access Data & Files On-the-Go

The SOS for iPhone and mobile client allows you to access your data stored in the SOS Cloud. Back up your photos, presentations, documents and music to the SOS Cloud, stream and access it through your SOS for iPhone, or the SOS mobile client. Access your data anywhere and anytime.

### One-Click File & Folder Sharing

From inside the Online Recovery Interface you can share your files with anyone to an email address. Never have a large attachment bounce again. Just share your backed-up data with your friends and colleagues. Or if you are a home user – simply share photos or videos.

## System Requirements

**Windows 7®**, **Windows Vista®** (32 bit version)

**Windows XP®** (32 bit versions of Professional, Home, Media Center or XP Tablet)

**Windows Server 2003®**

**Windows Server 2008®**

**300 Mhz** processor

**30 MB** hard drive space

**High-speed Internet** connection recommended

**Download Size: 20 MB**
